Herbicide Use Rates

Blends	Chemical Recommendation
	Pre-emerge: 32oz/acre of roundup
	Pre-plant: 32 oz/acre roundup + 18 oz/acre dual magnum. Post-emerge: 24-32 oz/acre of Roundup + 24 oz/acre of PercPlus.
	Pre-plant: 32 oz/acre of roundup + 16 oz/acre Dual Magnum Post-emerge foliar application: 16 oz/acre of clethodim (grass control) 32 oz/acre PercPlus.
	Pre-plant: 32 oz/acre of roundup.
	Pre-plant: 32 oz/acre roundup + 18 oz/acre dual magnum. Post-emerge: 32 oz/acre roundup or 24 oz/acre roundup + 12.8 oz/acre 24D-B or if just mainly grass apply 16 oz/acre of clethodim + 16 oz/acre of Aciflurfin.
Individual Seed	
Wildlife Rice	Pre-emerge: 32oz/acre of roundup. Post-emerge: 12.8 oz Aciflurfin + 24 oz PercPlus.
Milo WGF	Pre-emerge: 32 oz/acre of Roundup.
Milo (Concept Treated)	Pre emerge: 32 oz/acre of roundup + 18oz/acre Dual Magnum
Mung Beans	Pre-emerge: 32 oz/acre of Roundup + 16 oz/acre of Dual Magnum
Sunflower (peredovic)	Pre-emerge: 32 oz/acre of Roundup + 20 oz/acre of Dual Magnum Post-emerge: 16 oz/acre of Clethodim. NOTE: Can apply Dual magnum Post emerge with layby rig spraying up plant leaves at 16oz/acre.
Sunflower (clearfield)	Pre-emerge: 32 oz/acre of Roundup + 20 oz/acre of Dual Magnum. Post- emerge: 16 oz/acre Clethodim + 5 oz/acre Imazamox (Beyond) over the top. If spraying with layby rig underneath plant leaves can apply Dual Magnum at 16 oz/acre.
ALL Millets	Pre-Plant: 32 oz/acre of Roundup.

On all pre-plant applications: Crop Oil would be a great option using a rate of ½% of total spray volume solution

On all Post-Emerge applications: Nonionic Surfactant is a great option using a rate of ½% of total spray volume solution.

PercPlus can be applied anytime during the growing season by itself using 32 oz/acre.

Disclaimer: Results may vary due to weather or applications made.

*Recommended volume is 10 gallons of water per acre.

**Read and follow label instructions prior to use.

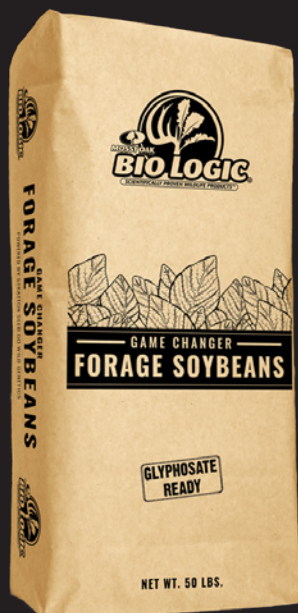

***Any additional questions feel free to call local rep.

GAME CHANGER

FORAGE SOYBEANS

BioLogic Game Changer Forage Soybeans are glyphosate tolerant soybeans with good height, great stress tolerance, and an excellent disease package. High protein forage is ideal for providing nutrition for antler, body weight, and fawn growth. Game Changer soybeans are suitable for most all soil types and are also an indeterminate growth type. This bean keeps growing under adverse conditions ensuring a successful, clean plot with glyphosate-resistant weed control.

For a later maturing bean, try **BioLogic Game Changer 2.0**. Similar to the original Game Changer, this forage bean offers substantial amounts of forage and pods to help manage your deer.

Offered in **50lb bags**

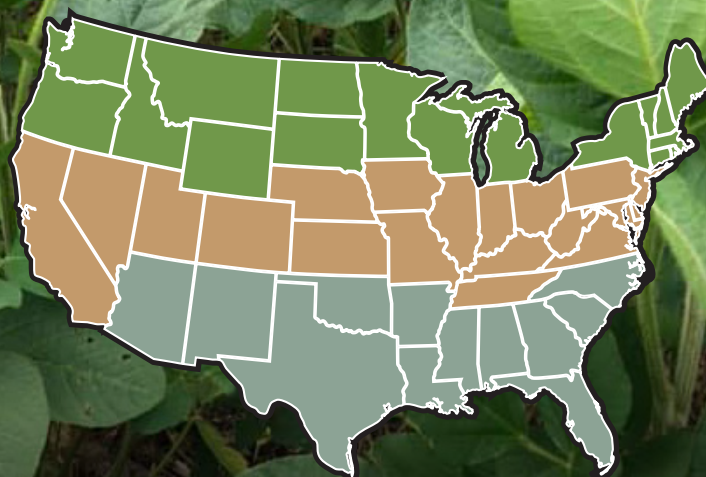

Planting Rate:

Drilled | 50lbs/acre
Broadcast | 80lbs/acre

GAME CHANGER

FORAGE SOYBEANS **2.0**

Planting Dates:

May 15 - July 15

May 15 - July 15

May 15 - July 15

Hammer Down is our newest addition to the GoWild line-up! With a blend of cowpeas, mung beans and soybeans this new food plot has everything to support your deer population during the spring and summer to optimize antler growth and prepare for fall.

Iron & Clay Cowpeas are highly digestible, protein-rich, and drought/heat-tolerant making them a popular food source for deer during the summer months.

Mung Beans are known for their high protein content and are a very attractive food source for deer, especially their delicious flowers.

Soybeans are a tried and true favorite food source for deer and are high in protein and fat which are important going into the late season when they need the energy the most.

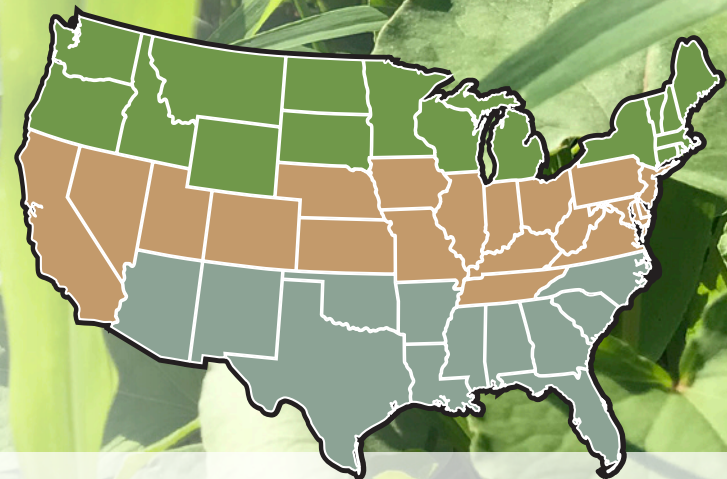

Available in 40 lb bags
1 bag per acre

BONA IDE

Bonafide is the ideal blend of Glyphosate Tolerant forage soybeans and Glyphosate Tolerant dwarf corn. This provides great opportunities not only for growth of your deer herd throughout the spring and summer but great attraction during the hunting months attracting both deer and waterfowl. Both of these components will help with weed control in your field all while producing quality forage and grain for all forms of wildlife. The ear placement from the corn will provide a desired height of food for wildlife such as deer and waterfowl.

Planting Rate: One bag per 1/2 acre
Offered in **25-28 lbs bags**

Planting Dates:

April 1 - June 15

April 1 - June 15

April 1 - June 15

The **Heritage** blend is designed to provide not only forage but cover to wildlife as well. This mix has great forage qualities along with structural benefits to help the forage grow to its greatest potential. Heritage has numerous species of seeds that will give the whitetail and other wildlife food during the summer months. This will allow you to have a healthier deer herd and give them the opportunity to grow to their greatest potential.

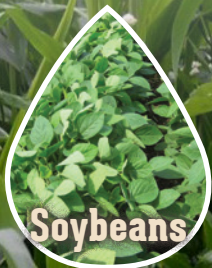

Call Stratton Seed Company and order Heritage to give the wildlife on your farm the nutrition they desire the most.

BUCK FORAGE OATS

FIRST CHOICE FORAGE FOR WHITE-TAILED DEER

The standard for Buck Forage Oats is to be the product by which you judge all other food plot seeds. We strive only to help you produce the most heavily used food plot you have ever experienced.

Key Features:

- ★ Unmatched Cold Tolerance & Freeze Resistance
- ★ Desired growth pattern to promote maximum forage production with high palatability
- ★ Extremely high in digestible energy
- ★ Excellent disease resistance to guard against loss of forage production capabilities.

Planting Map

- Plant Aug. 25 – Sep. 15
- Plant Sep. 1 – Sep. 30
- Plant Sep. 15 – Oct. 31

We always recommend a soil test well in advance of planting any seed, to ensure that your soil has adequate pH for the plant type you intend to produce.

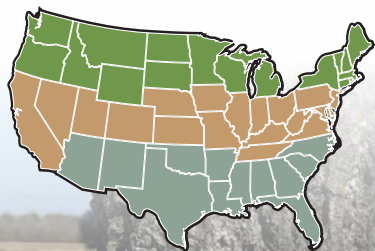

Available in 40 lbs and 50 lbs

REVIVAL

Stratton Seed's **Revival** is a perennial blend that's stacked with highly attractive forage that wildlife love. Providing forage every year to help your hunt end in a success. Once established, Revival will grow year in and year out for several years to provide quality forage. With crude protein levels up to 30%, give the whitetail the nutrition they need and desire most with Revival.

Available in ¼ acre (4.25 lbs) and 1 acre (17 lbs) bags
Planting rate: 4.25 lbs/quarter acre

Planting Dates:

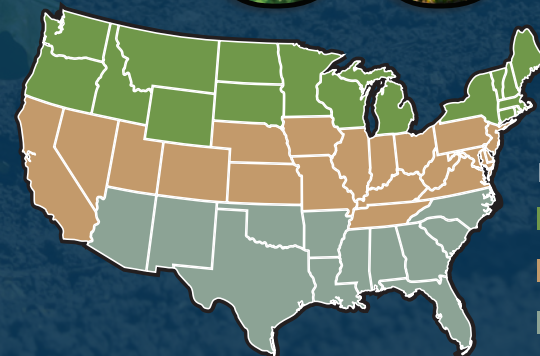

- July 15 - Aug 31
- July 31 - Sept 1
- Aug 15 - Sept 15

Big Buck Brassicas – or **Triple B** as we like to call it – is the perfect blend of old school and new school to keep your deer coming all winter long! This brassica mix can be planted in spring, summer or early fall and has a quick establishment date to start providing your herd with the nutrition they need in the fall and winter months. Winfred can provide an excellent source of energy and protein (approximately 22%) while also being highly palatable and digestible with its high leaf ratio. Pacer was bred for fast, vigorous establishment and quick maturity. It also has more leaf structure than most other forage turnips and is multi-crowned for improved re-growth potential even after aggressive animal foraging. This blend also offers Sugar Beets and Purple Top Turnips which are a long time standard in the food plot world.

Available in 4 lb bags

Planting Rate:
2 bags/1 acres

Planting Dates:

- July 1 - Aug 31
- Aug 1 - Sept 30
- Sept 1 - Oct 31

PLANT THE BEST TRUST

PREMIUM FOOD PLOT SEED

For over twenty years, BioLogic has been committed to helping hunters grow healthier deer herds and better bucks by offering only the highest quality seed blends, tested and proven to perform. Founded with a focus on excellence by Toxey Haas, BioLogic continues to prioritize premium seed components, optimal blend ratios, and a deep understanding of wildlife needs.

MAXIMUM™

Maximum is one of our most popular blends—and for good reason. It delivers unbeatable yield, attractiveness, and nutrition. This 100% brassica mix features multiple varieties that mature at different rates, providing highly palatable forage throughout the season. Designed to promote rapid weight gain, optimal health, and impressive antler growth.

ENDURANCE RADISH™

BioLogic's exclusive New Zealand Endurance Radish is a next-generation radish developed specifically for deer, offering nutrient-dense, highly palatable forage with soft, smooth leaves. It stands out for its exceptional drought, browse, and cold tolerance, making it ideal for extending attraction and feeding throughout the season.

DEER RADISH™

BioLogic's DEER-RADISH is highly attractive to whitetails and 100% consumable—from the lush tops to the sweet, nutrient-packed roots. It can be planted alone or mixed into other blends for added draw. Its deep roots break up hard soil, improve soil health, and help suppress weeds and nematodes—making it a great option for new plots with minimal chemical use.

CLOVER PLUS™

Clover Plus combines nutrient-rich red and white clovers with hardy chicory to create an irresistible, high-performance perennial plot. Developed for bigger leaves and better digestibility, this blend delivers year-round attraction, especially during critical growth periods. Drought-resistant and tough—offering unmatched nutrition, taste, and reliability for whitetail and turkey.

FOOD PLOT SOIL TEST

Understanding your soil helps you choose the right plants and make the necessary improvements for a healthy, productive food plot. To make it easy, BioLogic offers a simple way to test soil characteristics—one of the most important factors for success.

Basic Food Plot Soil Test

Phosphorus (P) | Potassium (K) | Calcium (Ca) | Magnesium (Mg) | Soil pH

Advanced Food Plot Soil Test

Phosphorus (P) | Potassium (K) | Calcium (Ca) | Magnesium (Mg) | Soil pH + Micro Nutrients: Sulphur (S) | Boron (B) | Copper (Cu) | Iron (Fe) | Manganese (Mn) | Zinc (Zn) | Sodium (Na)

PLANT THE BEST TRUST

ADDITIVES

Our scientifically researched additives are designed to mix with other forage plantings. This provides an effective and economical way to customize your food plot, create the ultimate in attraction, nutrition and reliable growth, and observe the impressive difference BioLogic™ can make.

ALFALFA

A favorite food for whitetail, but difficult to grow — until now. Our Alfalfa provides high protein, strong early and late season attractiveness and good resistance to drought and browsing.

CHICORY

One of the finest forages for increased antler growth — and our variety adds high protein levels, durability, browse tolerance and extreme attraction to the list.

HOT SPOT

Remote stands often provide the best opportunity for spotting mature bucks — and the worst location for a food plot. Without the ability to utilize machine cultivators or heavy amounts of soil additives, establishing a planting off the beaten trail can be challenging at best. The solution is BioLogic Hot Spot No Till Food Plot Seed — a scientifically selected blend of wheat, deer radish, rye, and rape--designed to be fast-germinating, extremely attractive to deer and incredibly easy to plant. No soil-tilling is required; simply clear the ground and apply the seed. Ideal for planting near treestands and in woodland clearings — and for luring pressured bucks that shun high traffic locations.

POND FERTILIZER

Pond fertilizer is essential for a healthy, balanced ecosystem. It promotes strong blooms, supports fish growth, and helps control unwanted weeds with an easy, effective application.

PERFECT POND

Perfect Pond Plus is a high-quality granular fertilizer developed by American Sportfish Hatchery to promote a healthy pond bloom and support fish health. Easy to apply at 5 pounds per acre, it dissolves quickly in the upper water column and includes essential micronutrients for optimal results.

MINERALS / SUPPLEMENTS

Minerals and supplements are key to whitetail health, supporting growth, antler development, and long-term attraction. Natural, long-lasting sources ensure consistent nutrient intake and help hold deer in your area.

BIOROCK

BioRock is an all-natural mineral supplement that attracts deer and supports their health, growth, and development with essential trace minerals.

ROASTED RACK ATTRACT

Roasted Rack Attract is our specially formulated blend of roasted soybeans and corn that is second to none on the market. Packed with 16% protein and 6% fat, this provides your deer with all the protein they need to maximize antler growth when they need it most. This blend is not only a protein feed but when you want to bring in that elusive big buck during hunting season, no attractant is better on the market. Rack Attract is very versatile in that it's clean so it can go in spin type feeders, gravity feeders, trough feeders or you can simply pour it on the ground.
